BIZPILOT STUDIO

Small Business Management Workbook

Customer User Guide • Blank Edition • Version 15.1

PLAN	QUOTE	MANAGE
Track leads, clients and projects.	Build quotations with multiple line items.	Track invoices, payments and expenses.

A practical spreadsheet toolkit for organizing everyday small-business activity in one workbook.

Prepared by BizPilot Studio

Workbook version: V15.1 • Guide revision: November 2026

1. Start here

This is a blank-use edition. It contains no preloaded sample customers, leads, services, quotations, projects, invoices, payments or expenses. Start by saving a working copy of the file, then replace the example business profile details with your own.

Recommended setup order

- **1. Settings:** enter your business name, email, phone, website, currency, tax label and default tax rate. Use one currency consistently throughout the workbook.
- **2. Services:** add each service or product with its category, description, unit, standard unit price, tax rate and active status.
- **3. Leads:** record new enquiries, lead source, estimated value, status, follow-up date and next action.
- **4. Clients:** add confirmed customers with a unique Client ID and complete contact details.
- **5. Start operating:** create quotations, track delivery in Projects, issue invoices, record receipts and log expenses.

Important data-entry rules

Use unique IDs for every lead, client, quotation, invoice, payment and project. Keep client/company names consistent between tabs because some printable document fields look up client details by name. Enter real Excel dates in date fields rather than date-like text.

Capacity: most working tabs are preformatted for up to 200 records (rows 4–203). Quote Line Items supports up to 1,000 line rows (rows 4–1003). Extend formulas, formatting and dropdown validation together before using more rows.

2. Understand the worksheets

Worksheet	Purpose
Dashboard	At-a-glance KPIs and business performance snapshot.
Settings	Business profile, currency, tax defaults and editable dropdown values.
Leads	Enquiries, lead status and follow-up actions.
Clients	Customer directory and contact information.
Services	Reusable service/product catalogue and standard prices.
Quotations	One quotation header per Quote ID; totals are calculated.
Quote Line Items	One or more item rows per quotation; repeat the same Quote ID.
Projects	Delivery dates, budgets, priorities, statuses and progress.
Invoices	Invoice header linked to a quotation; totals and balances calculate.
Payments	One row per receipt; multiple receipts per invoice are supported.
Expenses	Operating expenses and payment details.
Monthly Report	Rolling 12-month cash flow and invoiced-revenue overview.
Instructions	In-workbook quick reference.
Quotation Print / Invoice Print	Legacy print layouts retained for compatibility.
Quotation Print v2 / Invoice Print v2	Updated A4 printable layouts with up to 12 line items.

3. Quotation to invoice workflow

Use this sequence for a typical client engagement. The workbook keeps quotation headers separate from quotation detail lines so a single quotation can contain several services or products.

Build a quotation with multiple items

- In **Services**, create the service catalogue first. Enter the standard unit price and tax rate for each item.
- In **Clients**, add the customer. Use a unique Client ID and a consistent Client / Company name.
- In **Quotations**, add one header row with a unique Quote ID, date, client name, validity date and status.
- In **Quote Line Items**, add one row for each service/product. Repeat the same Quote ID on every line. Select the service and enter description, quantity and any fixed discount amount.
- The workbook looks up unit, price and tax rate from Services and calculates each line subtotal, tax and total. The quotation header aggregates matching line items.
- If you are creating a simple one-line quote, the original single-line fields in Quotations remain available; do not mix a single-line quote and line-item rows under the same Quote ID.

Issue an invoice and record receipts

- In **Invoices**, enter a unique Invoice ID, the related Quote ID, issue date and due date. Client, subtotal, tax and total are calculated from the quotation.
- In **Payments**, record every receipt against the exact Invoice ID. Enter a separate row for each part-payment.
- The invoice calculates amount paid, remaining balance and a status such as Pending, Part Paid, Paid or Overdue.

Discounts in Quote Line Items are fixed currency amounts per line, not percentages. Tax rates are entered as percentages (for example, enter 18% as 18% or 0.18 depending on the cell's percentage format). Check the cell format and verify the displayed rate before issuing a quote.

4. Print or export a document

Use **Quotation Print v2** or **Invoice Print v2** for the updated print layouts. Select the relevant document ID in cell **B5** on the V2 sheets. (The older print sheets use cell B4.) Complete your business details in Settings and client contact/address details in Clients before printing.

Then choose File → Print or File → Export / Save As PDF. Review the document before sending it to a customer: confirm the client, dates, line items, tax, totals, payment details and any required legal text. The V2 templates are designed for A4 and display up to 12 line items; longer quotations should be split or accompanied by a separate detail sheet.

5. Read the Dashboard and Monthly Report

Dashboard: includes total clients, open leads, active projects and outstanding invoices, plus a performance snapshot for year-to-date invoiced revenue, cash collected, expenses, net cash, quote win rate, average invoice, collection rate and projects due in the next seven days.

Monthly Report: presents a rolling 12-month view of payments received, expenses, net cash flow, invoices issued, new clients, invoiced revenue and open receivables.

Interpretation matters: Net Cash is cash collected minus recorded expenses; it is not accounting profit. Open Receivables is based on current invoice balances for invoices issued before the relevant month boundary; it is not a historical month-end balance.

6. Troubleshooting and good practice

If formulas appear blank or stale

Open the workbook in Microsoft Excel and set Formulas → Calculation Options → Automatic. Press Ctrl+Alt+F9 to force a full recalculation. Make sure required IDs and dates have been entered, and do not overwrite formula-driven cells.

If a client detail is missing from a print layout

Check that the Client / Company name in Quotations matches the corresponding name in Clients exactly. Confirm the client email, phone and address are entered in the Clients sheet.

If a service price or tax rate is not appearing

Confirm the service name selected in the quotation line exactly matches a service in Services, and that the service has a unit price and tax rate. Update the catalogue rather than manually overwriting formula-driven lookup cells.

If importing into Google Sheets

The workbook uses standard spreadsheet formulas and no macros. After importing, inspect the dropdowns, charts, print layouts and formulas. Formatting and print pagination can change between spreadsheet applications.

7. Important limitations and disclaimer

This workbook is an operational tracking and document-preparation tool. It is not accounting software and does not provide accounting, tax, legal or regulatory advice. Configurable tax fields do not guarantee compliance in any country. Verify tax rates, invoice numbering rules, required disclosures, record-retention obligations and other local requirements with a qualified professional before using documents externally.

Keep regular backups. Restrict access to the workbook because it may contain customer contact details and financial information. Test the workbook with your own workflow before relying on it for business decisions.
